# 1. Password Generator

Create a secure password generator tool which helps prevent a security threat to users by getting a strong password.

Note: Instead of a toggle button you can also keep a checkbox!
When a user clicks on the "Generate Password" button the "Click Generate" text should be replaced with Password generated by the system!
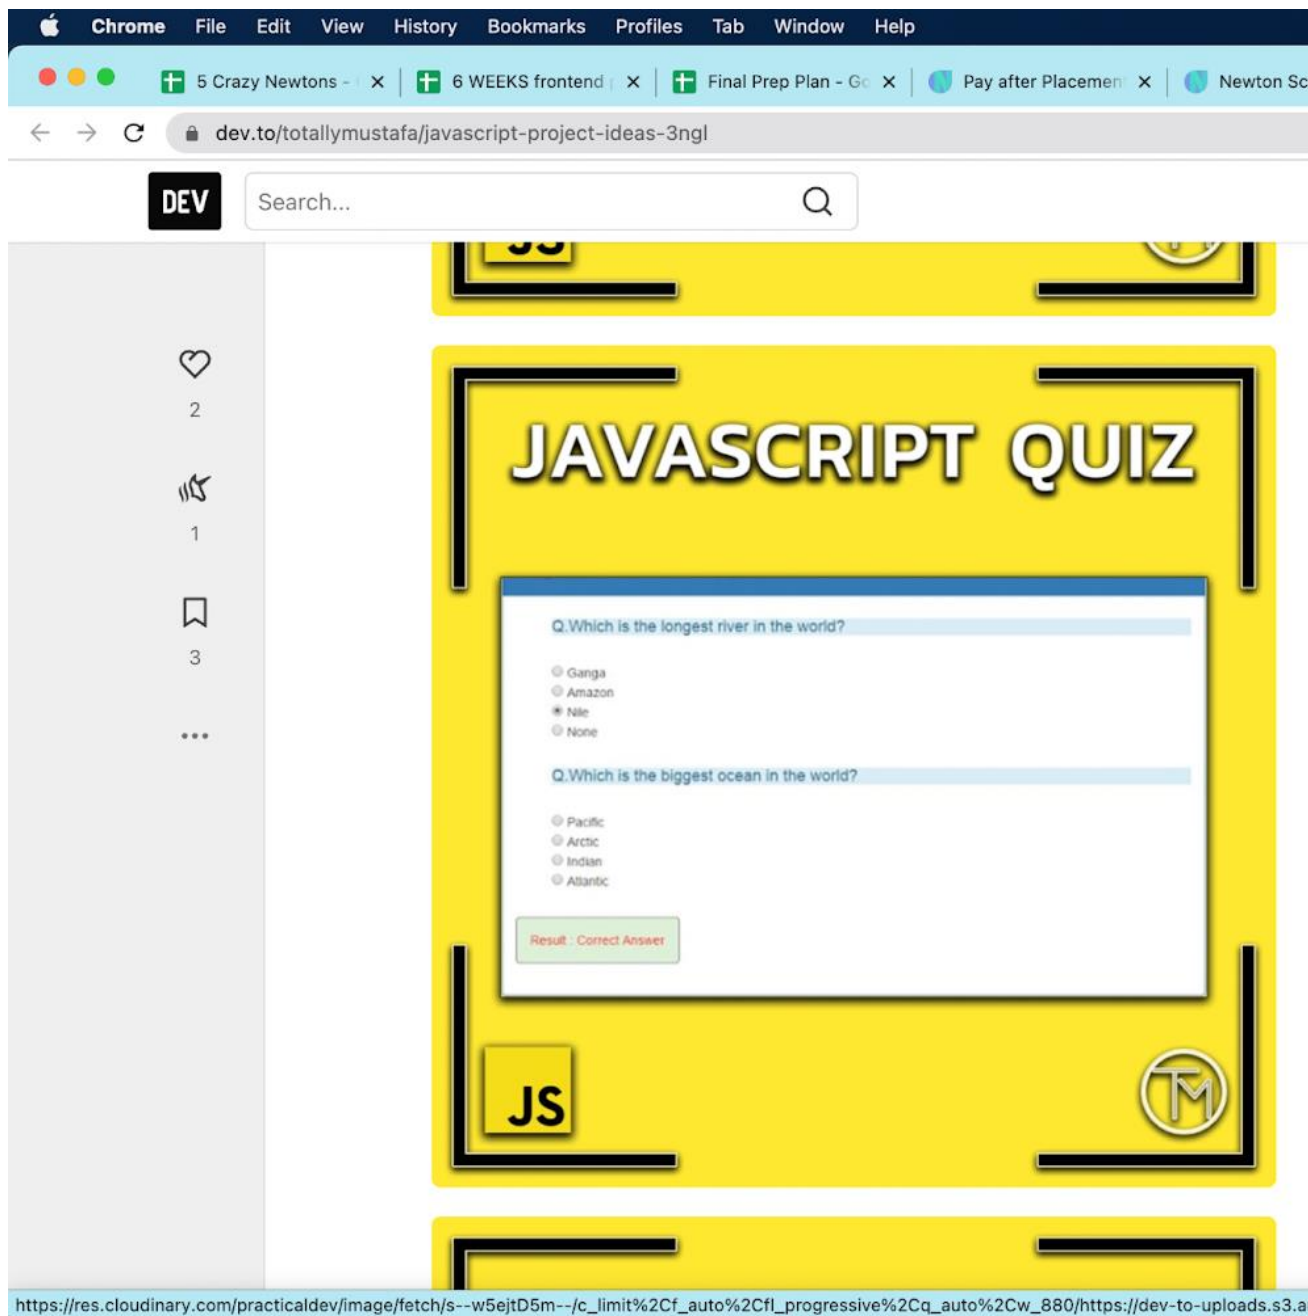

Techstack : HTML, CSS, JS

2.   JS MCQ Quiz

Create a google form type MCQ quiz which let's user answer the MCQ Question & when he submits the quiz using "Submit Button" the score should be displayed.

5 questions
Marks out of 5

>= 4 - yes (4 or 5)
<= 3 & >= 2 - Maybe (2 or 3)
1/0 - No (1 or 0)

Techstack : HTML, CSS, JS

3. Lyrics App
**Ex: https://vanillawebprojects.com/projects/lyrics-search/**

**Techstack** : HTML, CSS, JS (fetch, async-await)

Create a lyrics search web app using HTML,CSS, JS that lets users search songs by artist & also by song name as shown in below given image.

As soon as they search, all the songs with the "Get lyrics" button should be visible in front of all the songs.

On clicking it, the screen should show the lyrics for that particular song.

1. API for getting list of songs by artist or by song name:
https://api.lyrics.ovh/suggest/${term}

Ex: https://api.lyrics.ovh/suggest/rihanna

2. API for getting lyrics of particular song:
 https://api.lyrics.ovh/v1/${artist}/${songTitle}

 Ex: https://api.lyrics.ovh/v1/rihanna/Where Have you Been
